

Azodyl™

The #1 veterinarian-recommended supplement for renal support in both dogs and cats¹

Feature #1:

Contains 15 billion CFUs of probiotics to metabolize uremic toxins

The selected probiotics in Azodyl are specific strains that thrive in a uremic environment. They are able to efficiently metabolize toxins in the GI tract. Not all probiotics have this property.

Feature #2:

Trusted by veterinarians and pet owners

Recommended by veterinarians for more than a decade, Azodyl can improve quality of life in both cats and dogs. Most patients can see a benefit after 6 to 8 weeks when used as directed.

Feature #3:

Simplify administration for owners and streamline inventory management

Azodyl is available in a small capsule form and does not require food to deliver its beneficial probiotics. Only one SKU for both dogs AND cats makes inventory management easier for practices! Plus, the probiotic strains are safe to use with other therapies.
